

## Facilitation Report

**School: Waiau Pa School**

**Date: 5 July 2011**

### Worked with:

Rimu Team  
Karaka Team  
IT lead teachers

### Outcomes:

- In the first session I worked with the Rimu team. After looking through the plan and in discussion with the team I have suggested that the following tools could be used to facilitate the learning outcomes they are planning for <http://evernote.com> <http://maps.google.com> <http://sketchup.google.com> <http://popplet.com> we also had a look at how one of the thinkers keys BAR could be used to get students to think.
- In the middle block I again worked with a team to help with their planning. The tools that I have suggested that students could use to facilitate learning are <http://voicethread.com> <http://dipity.com> <http://www.aucklandcity.govt.nz/dbtw-wpd/heritageimages/apphoto.htm> <http://www.learnz.org.nz/> we also looked at tools such as <http://aviary.com> and <http://mugtug.com> for editing photos. I also suggested that a video like this could be used as part of a BAR key piece of work <http://youtu.be/Jlu5QmMWkpY>
- In the afternoon the ICT lead teachers and I designed the programme for the TOD on 18 July. We have created a form that staff will need to fill out so that we know who is attending which workshop <http://waiaupastaffpd.wikispaces.com/Call+back+day+resources> Please ensure that all staff know of this link and that they have made their choices before the day.

### Forward action:

- <http://dipity.com> is not working fully, I think that there might be a silent reporting block either from the firewall in school or most likely from Watchdog. This tool is excellent for the kind of work your students will be doing in the coming weeks.
- Google Body is a great tool for school, <http://bodybrowser.googlelabs.com/> however it requires that the GL plugin be installed or activated in IE. If you want to use this great site then firefox has this protocol already installed and works really well.
